13 CLIMATE ACTION

GOAL 13: CLIMATE ACTION

Take urgent action to combat climate change and its impacts

Sri Lanka has numerous recent experiences of climate-induced disasters, which have resulted in immense economic and social losses. Furthermore, recent projections suggest a tendency towards more polarized distributions of rainfall in the future, and, as an island with a low-lying coastal belt, the country is vulnerable to sea-rise in the long term. Notably, Sri Lanka is one of the only two developing countries from the region that have submitted National Adaptation Plans to the UNFCCC. However, addressing climate change is a relatively new area of policy intervention in the country, with institutional and information gaps hindering effective implementation.

MAIN FEATURES

For Policy Makers

The "Access Data" function allows you to look at patterns, trends, and disparities. There is a variety of indicators to select your data from which can then be downloaded as tables, graphs, or maps.

For Students or Researchers

The "View Dashboard" feature shows the current standing of Sri Lanka in achieving the SDGs, making adding data and statistics to essays and research papers that much easier with accurate, government-verified information.

For Agencies

API documentation will provide access to retrieve SDG-related data and associated information. Access API feature has been added to connect the system with other data platforms, and applications. So, in addition to graphs and charts, this allows you a bulk pull of government-verified data.

DATA REPORTING

Data important for SDG related data reporting

DATA ANALYSIS

Data important for SDG related trend analyzing

FUTURE PLANNING

Data important for SDG acceleration planning
